

AILEX on iPhone & iPad

Install, set up and start learning. About five minutes, once.

1 Install the app

- 1 Open <https://4wood70.github.io/ailex/> in **Safari**. This must be Safari — Apple does not allow other browsers to install apps.
- 2 Tap the **Share** button at the bottom of the screen — the square with an arrow pointing up. If you cannot see it, swipe down on the page and it will appear.
- 3 Scroll down the menu and tap **Add to Home Screen**.
- 4 Tap **Add** in the top right corner.
- 5 The **AILEX** icon appears on your home screen. Always start from that icon — the app then opens full screen, with no address bar.

Cannot find "Add to Home Screen"? You are almost certainly not in Safari. If you opened the link from a messenger or another app, tap the menu and choose **Open in Safari** first.

2 Get your free Gemini key

AILEX writes your lessons with Google Gemini. The key is free, it belongs to you, and it is stored only on your device. You do this once.

- 1 On the first screen, tap **Get key in Google AI Studio**. Google AI Studio opens.
- 2 Sign in with your Google account if you are asked to.
- 3 Tap **Create API key**, then **Create API key in new project** if Google offers it.
- 4 Tap the key to **copy** it. It is a long line starting with **Alza...**
- 5 Go back to AILEX, paste the key into the field and tap **Save and continue**.

Keep a copy of the key somewhere safe — in your notes, for example. Google shows it only once. If you ever lose it, you can simply create a new one the same way.

3 Set up your profile

Five short questions. The last one matters most: **your interests and line of work**. Every story, quest and example sentence is built around what you write there, so be specific — "CNC machine setup", "carpentry", "sea fishing" all work far better than "hobbies".

A short placement test follows. Answer honestly and use **I don't know** when you do not know — guessing puts you on a level that will not fit. Then your first lesson begins.

4 Using AILEX day to day

- **Tap any word** in a text to see its translation, pronunciation and the form it is in. Tap the **blue book** icon next to it to find out why the word is shaped that way in this sentence.
- **Speaker button** reads the phrase aloud. Tap it as often as you like.

- **Light bulb** gives a hint. The first tap reveals the beginning of the answer, the second the whole of it.
- **Superquest** is a long story that revisits everything you have learned. Use it for revision.
- Your progress saves itself. You can close the app mid-lesson and come back days later.

5 Protect your progress

Everything — your lessons, vocabulary and statistics — lives on this device only. Nothing is kept on a server, so nothing can be recovered for you.

- Do **not** delete the AILEX icon. Deleting it deletes your progress with it.
- Open **Settings** → **Export database** from time to time and keep the file. It restores everything, and it moves your progress to a new phone.

Good to know

- **Voice dialogue is not available on iPhone or iPad.** Apple does not let web apps use speech recognition outside the Safari browser itself. Everything else works fully.
- An internet connection is needed while you learn — lessons are written as you go.
- The free Gemini quota is generous and is enough for daily study. If lessons ever pause, wait a minute and carry on.
